

SMART DIGITALIZATION FOR MARITIME LOGISTICS

A cloud-based workflow platform that digitalizes container handling, customs, and invoicing across ships, ports, and yards

Turning maritime workflow challenges into a unified digital platform

Maritime teams run complex operations across ships, ports, and yards, often using systems that evolved independently over time.

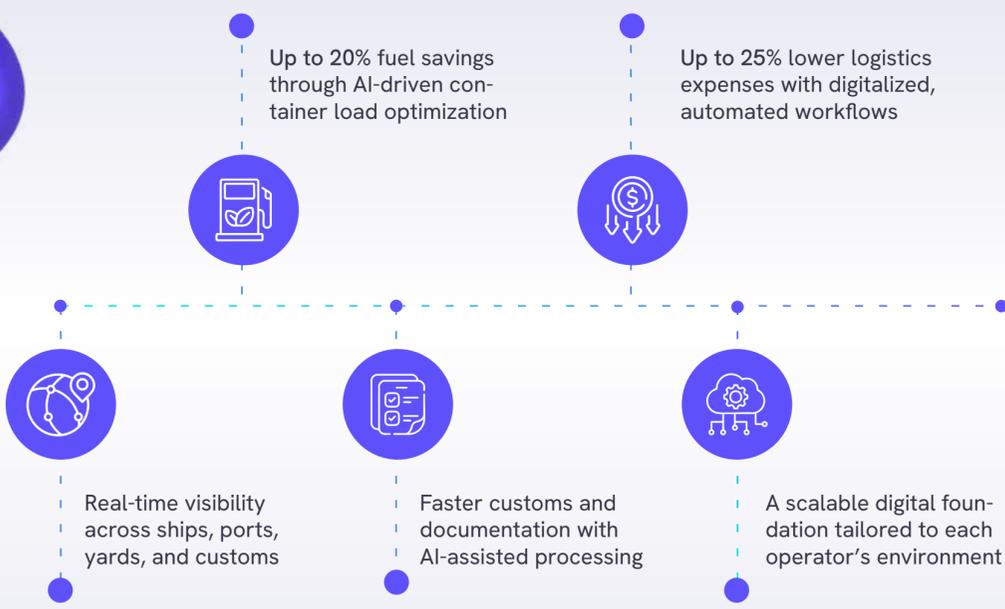

This creates natural gaps that require manual steps to keep container handling, customs, and invoicing moving.

Our framework digitalizes these workflows end to end and becomes a cloud-based platform shaped to each operator's needs. It unifies data, streamlines core processes, and uses AI to improve loading/offloading, customs, and invoicing. **The result:** real-time visibility, faster coordination, and lower OPEX.

Core capabilities

- 01** Cloud-native platform
- 02** Unified operational & customs data
- 03** Rugged device access with offline support
- 04** GPS, sensor & satellite integration
- 05** AI for optimization & documentation
- 06** Outcome-driven, SLA-based support

Benefits

How we deliver

- Cost-efficient automation:**
Reduce manual workloads and process delays with AI- and automation-enabled workflows for container movement, customs, and invoicing
- Outcome-based engagements:**
Service SLAs tied to uptime and workflow accuracy, ensuring reliability and shared accountability
- Change-ready deployment:**
Agile rollout with training support to streamline adoption without disrupting operations
